RECON™ INFOSEC

We're SOC-full of smarties ;)

www.reconinfosec.com

Meet Michael!

When he's not hiking the PCT, climbing a mountain, or testing his endurance with a run around the Grand Canyon, you'll find Michael crushing cyber threats and coaching customers through proactive measures they can take to prevent the next big incident tomorrow. Epic adventures, epic skills, epic dude.

Today You've been chosen to receive
Costco $1000 Gift Card

100% FREE!

You have been chosen to participate in our Loyalty Program for **FREE!** It will take you only a minute to receive this fantastic prize.

Heather Thacker
@hhthacker
almost booked this airbnb, then saw that it was not secure
HTTP

THINGS JUST
GOT REAL

Top 3 Easy Changes

- Block as many file types as you can
  - Use the included “Recon - Rare File Extension” for recommended file types
  - Specifically, .html and .htm have a large impact on AitM drive by phishing
- Add spam/quarantine filtering for TLDs which are not expected
  - Use the included “Recon - Link from Commonly Abused Registrant Country” for some recommended country code TLDs
  - Additionally, consider adding other commonly abused TLDs not associated with country codes (.info, .biz, .site, .online, .xyz, .top, etc.)
- Create an outbound email sending rate-limit
  - Mitigates Account Compromise: If an email account is hacked, rate-limiting prevents the attacker from sending a large volume of outbound phishing emails
